

Microsoft Azure Service Fabric 6.5 Third Refresh Release Notes

This release includes the bug fixes and features described in this document. This release includes runtime, SDKs and Windows Server Standalone deployments to run on-premises.

The following packages and versions are part of this release

Service Fabric Runtime	Ubuntu	<i>6.5.466.1</i>
	Windows	<i>6.5.664.9590</i>
Service Fabric for Windows Server	Service Fabric Standalone Installer Package	<i>6.5.664.9590</i>
.NET SDK	Windows .NET SDK	<i>3.4.664</i>
	Microsoft.ServiceFabric	<i>6.5.664</i>
	Reliable Services and Reliable Actors	<i>3.4.664</i>
	ASP.NET Core Service Fabric integration	<i>3.4.664</i>
Java SDK	Java for Linux SDK	<i>1.0.5</i>
Service Fabric PowerShell and CLI	AzureRM PowerShell Module	<i>0.3.15</i>
	SFCTL	<i>8.0.0</i>
Service Fabric Tooling	Visual Studio Tooling	<i>2.5.20615.1</i>

Key Announcements

- GA of Service Fabric Azure Files Volume Driver: The Azure Files volume plugin is a [Docker volume plugin](#) that provides [Azure Files](#) based volumes for Docker containers. This Docker volume plugin is packaged as a Service Fabric application that can be deployed to Service Fabric clusters. Its purpose is to provide Azure Files based volumes for other Service Fabric container applications that are deployed to the cluster. [Learn more about Service Fabric Azure File Volume Driver](#)

Service Fabric Runtime

Windows 6.5.664.9590 Ubuntu 6.5.466.1	Bug	Provisioning an application in SFPKG from external store hangs a long time.	Impact: Application provisioning could fail after a long time by time-out. The retry will succeed at provisioning the failed application. Fix: The web client is fixed to detect absent progress notification. It reconnects to the server again under such situation. Workaround: Retry
Windows 6.5.664.9590 Ubuntu 6.5.466.1	Bug	Increase the minimum length of passwords generated for SF application accounts to 16	Impact: SF6.5CU2 introduced a regression where the length of passwords generated for local accounts created by the SF runtime was reduced from 20 to 10 characters. On systems with policies that enforce a password length greater than 10, this causes account creation to fail. Fix: Password length is increased to 16. Workaround: on affected systems, override the password length restriction by executing: net accounts /minpwlen:10

Service Fabric Common Bug Fixes

Versions	IssueType	Description	Resolution
Ubuntu 6.5.466.1 Windows 6.5.664.9590	Feature	Cluster can be configured to accept expired self-signed certificates pinned by thumbprint for transport security.	Brief desc: Service Fabric now supports allowing a cluster secured with self-signed certificates declared by thumbprint, to use its cluster certificate past the certificate expiration (Valid To) date. The feature allows the recovery of a cluster that collapsed due to an expired certificate. How/When to Consume it: The feature is applicable only to clusters secured with self-signed certificates declared by thumbprint. Use it proactively to avoid a cluster collapse upon certificate expiration, or as a recovery measure after the cluster certificate has expired. GitHub link: https://github.com/Azure/Service-Fabric-Troubleshooting-Guides/blob/sedwardsdev/Security/How%20to%20recover%20from%20an%20Expired%20Cluster%20Certificate.md

Repositories and Download Links

The table below is an overview of the direct links to the packages associated with this release.

Follow this guidance for setting up your developer environment:

- Linux: <https://docs.microsoft.com/en-us/azure/service-fabric/service-fabric-get-started-linux>
- Mac: <https://docs.microsoft.com/en-us/azure/service-fabric/service-fabric-get-started-mac>
- Windows: <https://docs.microsoft.com/en-us/azure/service-fabric/service-fabric-get-started>
